Room 1322 Storer
UC Davis Campus

Instructor: John Troidl, MBA, PhD (jjtroidl@ucdavis.edu)
Department of Public Health Sciences
School of Medicine

Public Health 101 is an in-depth introductory class for the student who is interested in understanding the field of public health and is seeking to explore career options in public health.

The class will focus on public health concepts including: tools for measuring health in populations; the relationship of the public health system with medical care and other elements of the overall health system; and the identification of the government's unique contributions through federal, state and local public health agencies. Learn more about the field of biostatistics, epidemiology, environmental and occupational health, behavioral health, and health management and policy! This year we will also focus on the role of public health in "health reform" at the federal and state levels.

This class should be of interest to a wide variety of students who would like to consider public health as a future career, as well as, those who are pre-clinical, pre law, etc who want to have a solid understanding of public health as part of their education.
